

AI & SOCIETY

UNA MASTERCLASS
JAGIELLONIAN UNIVERSITY
KRAKÓW, 17-20.05.2022

Software

Mobile

Machine

In this masterclass, participants will explore the deeper questions behind the current debate on the impact of AI on society. The intensive four-day programme will pursue three different lines of scientific enquiry into the topic - the fundamental underpinnings of computational thinking and AI, ways of thinking about ethical questions in an AI context, and debates and controversies in specific areas of its use in society. Each of these will be taught in parallel through daily lectures, discussions, and exercises to enable participants to develop critical and well-informed thinking when approaching thorny questions around AI in society. The masterclass does not assume any technical background beyond secondary school level mathematics and familiarity with everyday life digital technologies, but it will also provide interesting interdisciplinary perspectives for those with a background in computing and AI.
