

# Tackling Antimicrobial Resistance by 360 One Health Approach (AMR360)

Una Europa Seed Funding Call 2024

---

## Abstract

Antimicrobial resistance (AMR) is one of the top 10 threats for global health. A One Health approach must be integrated to combat AMR.

This project will embrace a coordinated effort to foster educational and research initiatives offering a 360° approach to effectively combat AMR, driving self-awareness as well as the discovery and development of new antimicrobials.

AMR360 will deliver a training programme for postgraduate students combining an online course with a hands-on workshop targeting AMR and research strategies and policies with a One Health perspective.

The project will foster an interdisciplinary research consortium focused on AMR and aims to drive knowledge transfer from the academy to non-academic stakeholders and society.

Project Coordinators  
Ana Isabel Fraguas Sánchez  
Universidad Complutense de Madrid  
[aifraguas@ucm.es](mailto:aifraguas@ucm.es)

Elena González Burgos  
Universidad Complutense de Madrid
