

Encryption: Investigating Its Main Criminal Justice Aspects (EnIgMA)

Una Europa Seed Funding Call 2024

Abstract

The EnIgMA project intends to corroborate and enlarge an existing network of Una Europa universities to foster dialogue about a technology shaping the discourse on crime perpetration, enforcement and fundamental rights protection: encryption.

EnIgMA will focus on (i) police decryption, encryption as an investigative methodology, (ii) minimising interference with individual rights; and (iii) encryption used to create a secure environment in an increasingly digitalised justice system.

This dialogue will embrace all three Pillars of Una Europa's 2030 Strategy – research, education, and societal impact – connecting researchers from different fields and universities, offering guest lectures to students, and disseminating findings through an international conference and on the LIMA Blog, launched thanks to previous Seed Funding.

Project Coordinator
Anna Mosna
Universiteit Leiden

Participating institutions
Universiteit Leiden
KU Leuven
Freie Universität Berlin
Universidad Complutense de Madrid
Uniwersytet Jagielloński w Krakowie
University of Edinburgh
Alma mater studiorum - Università di Bologna

Duration
January 2025 – December 2025

Budget
€24,415
