

Interdisciplinary and community-based research on just energy transitions: The role of green hydrogen (JUSTRANS-GH2)

Una Europa Seed Funding Call 2024

Abstract

The JUSTRANS-GH2 project engages academics, policymakers, industry, and civil society in transdisciplinary problem framing around the role of green hydrogen in a just energy transition.

The project will focus on European hydrogen, but the innovative research design will be applicable to other transitions and geographical areas.

JUSTRANS-GH2 will convene meetings among academics and exploratory interviews, focus groups, and surveys of stakeholders in hydrogen hubs. This will contribute to the creation of an interdisciplinary research network with a strong presence of early-career researchers; a procedure for research design that facilitates participation, appropriation, and action by stakeholders of energy transitions; and the design of a research project that will be submitted to European funding calls.

Participating institutions

Universidad Complutense de Madrid
Université Paris 1 Panthéon-Sorbonne
Freie Universität Berlin
Helsingin yliopisto/Helsingfors universitet
Uniwersytet Jagielloński w Krakowie

Duration

January 2025 – December 2025

Budget

€20,435
