

Preparation of Prospective Projects on Maternal Care (PreMaCare)

Una Europa Seed Funding Call 2024

Abstract

Most pregnancies are uncomplicated, happy, and exciting events. However, as many as 17 in every 1000 deliveries may be complicated by severe maternal morbidity, leading to intensive care unit (ICU) admission.

Pregnant and postpartum women admitted to the ICU suffer short- or long-term physical and mental health complications with consequences for women, their children, families, and caregivers. Postpartum depression affects 15% of women. Suicide is a leading cause of maternal mortality within the first year after delivery in high-income countries.

There is a paucity of evidence addressing outcomes and reporting international data on maternal care, including maternal well-being. PreMaCare aims to set up a consortium and create a road map for future research projects on maternal care.

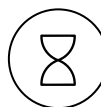

Project Coordinator
Magdalena Kołak
Uniwersytet Jagielloński w Krakowie
magdalena.kolak@uj.edu.pl

Participating institutions
Uniwersytet Jagielloński w Krakowie
University of Edinburgh
KU Leuven
Universiteit Leiden

Third parties
ESAIC Patients' Forum
Hospital Universitario La Paz
French Obstetric Anesthesia Working Group
Nottingham UK, East Midlands Critical Care Network
Pomeranian University
Mummy's Star
University Hospital Helsinki (HUS)

Duration
January 2025 – December 2025

Budget
€16,933
