

# Working together in Europe towards One Health around the world (WISE CARE)

Una Europa Seed Funding Call 2024

---

## Abstract

WISE CARE's objective is to develop an interdisciplinary and transnational academic minor Sustainable Health and Care (MSHC) for Bachelor students.

An interdisciplinary approach is needed to face the current complex healthcare challenges such as climate change and workforce shortages. Therefore, this minor will incorporate two interdisciplinary approaches, One Health and Population Health Management, which are interconnected through their shared goals of holistic and integrated health improvement.

Early-career researchers from different disciplines working at five Una Europa universities are in the lead to develop an outline for the MSHC. The outline will be used to apply for Erasmus+ cooperation partnership funding which can be used to further develop the minor and structural external funding.

Project Coordinator
