FACE - Future Crime: Future Aspects of Crime and Enforcement

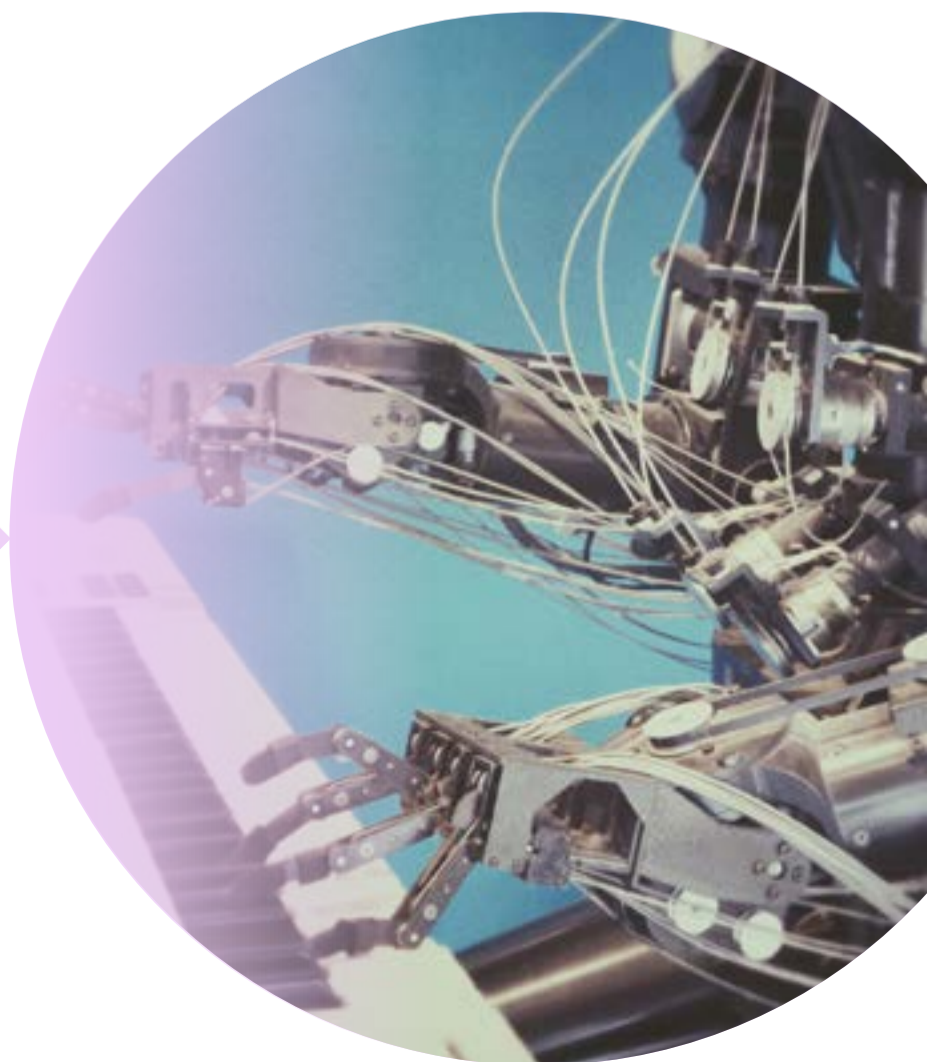

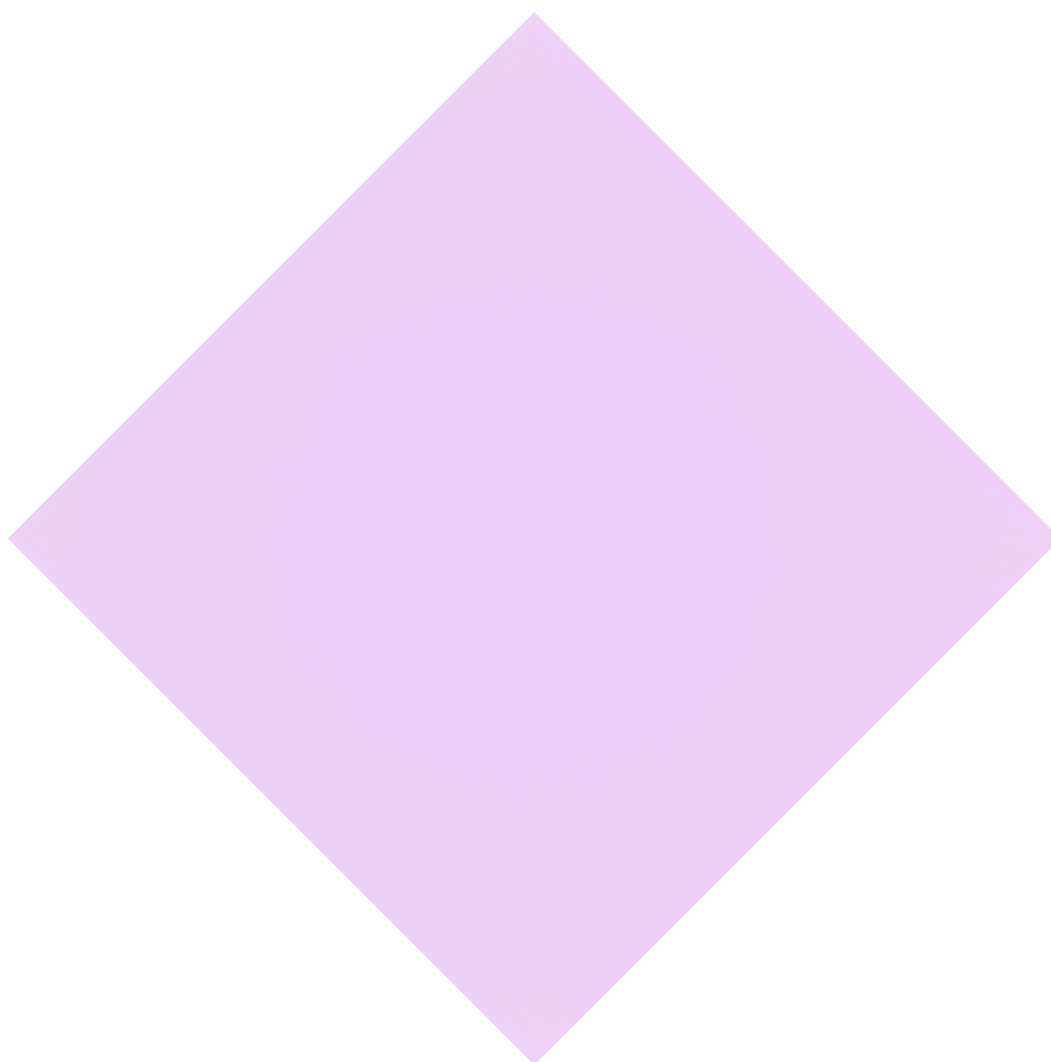

FACE seeks to create a multi-level dialogue to facilitate collaboration through discussion and analysis of emerging technologies and the impact they have on the structure of crime and investigation. The project will focus on the technological advancements of the so-called Web3.0 – Artificial Intelligence, Blockchain and Metaverse – and related new features of the internet to examine how criminal patterns and investigative strategies may evolve. Given the paradigm-shifting nature of these technologies, scholars and policymakers need to adopt a forward-thinking approach to identify risks and vulnerabilities, overcoming piecemeal approaches. Through a holistic analysis of the impact of the identified technologies on the criminal justice system, the project will establish a network to foster discussion on the balance between liberties and crime control. This network will initiate new multidisciplinary research and education in this research area through seminars, a conference, and the development of a blog: LIMA, or Lawyer-In-The-Middle-Attack. The LIMA blog ensures long-term dissemination of the project, aiming to become a digital agora for dialogue and analysis of cybercrime-related topics within the Una Europa alliance and beyond.

✈ Carsten Momsen, Full Professor in Criminal Law, Criminal Procedural Law and Corporate Criminal Law at Freie Universität Berlin
