An interdisciplinary, international and collaborative research approach to developing critical digital health pedagogies for teachers of physical education

Seed Funding

One Health

Digital health technologies such as health apps or fitness content on social media, can encourage young people to adopt healthy lifestyles, but not always in a positive way. In DigiHealthPE, the focus is on how to best 'equip' teachers of Physical Education to support young people to navigate the complex landscape of digital health in a critical way. By organizing workshops for the development of new pedagogical ideas and activities, the project moves beyond binary categories such as human/non human, mind/body to expand the range of critical possibilities in a way that recognize the affective forces, the relational dimensions and the agential capacities of the 'assemblage learner-digital health technology'.

Details

Third Parties:

University of Bath

Budget: €11,000

Duration of funding

period: July 2020 -

March 2022

Key contact

Maria José Camacho-Miñano
Complutense University of
Madrid
mjcamacho@ucm.es

Partners involved

Alma Mater Studiorum, Università di
Bologna
Helsingfors universitet
Universidad Complutense de Madrid
University of Edinburgh
